Industrial Wood Coatings

Medium Rubbed EffectV85F302

DESCRIPTION SHER-WOOD[®] F3 KEMVAR[®] Varnish is a formaldehyde free conversion varnish coating designed for coating interior woodworking.

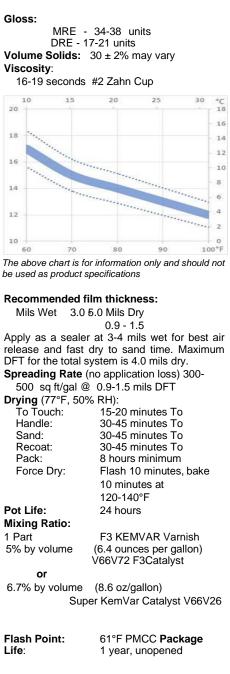

Advantages:

- Formaldehyde free coating at application and on cured parts
- Contains U.V. Absorber for added wood protection
- Meets KCMA test requirements for finishes as a self-seal system, or when used over F3 KEMVAR Sealer, T85F300
- Ready to apply following catalyzation, no reduction required
- UL GREENGUARD Gold Certified for low chemical emissions

An Environmental Data Sheet is available from your local Sherwin-Williams facility or at www.paintdocs.com. Dull Rubbed Effect.....V85F303 She-Wood F3 Catalys.....V66V72

SPECIFICATIONS

Surface preparation

F3 KEMVAR[®] VARNISH

Wood - New Work (interior only):

Must be clean, dry, and finish sanded. Substrate should be free of grease, oil, dirt, fingerprints, and any contamination to ensure optimum adhesion and coating performance properties.

Moisture content of wood should be 6 to 8%.

Previously finished wood (interior only):

Strip old finishes completely and remove all contaminants from the surface. Make sure surface is dry. Finish as new work

Finishing System:

- Color Wood Stain or tone as desired and dry thoroughly.
- Seal Apply a full coat of F3 KemVar Varnish as a sealer or F3 KemVar Sealer (T85F300) at 3.0 – 5.0 wet mils. See sealer data sheet for details.
- Air dry 30-45 minutes, sand with
 240, 320, or sponges as required.
- Topcoat apply F3 KemVar Varnish at 3.0 - 5.0 mils wet.
- For more depth or build, sand and apply an additional coat.
- Do not exceed 4.0 mils DFT for the total system.

Testing: The information, data, and recommendations set forth in this Product Data Sheet are based upon test results believed to be reliable. However, due to the wide variety of substrates, substrate properties, surface preparation methods. equipment and tools, application methods, and environments, the customer should test complete system for adhesion the compatibility and performance prior to full scale application.

APPLICATION

Typical Setups

Conventional Spray:

Air Pressure	40-50 psi
Fluid Pressure	6-8 psi

Airless Spray:

Pressure	1200-1800psi
Тір	

Air Assisted Airless:

Assist Air Pressure	10-25 psi
Fluid Pressure	400-800 psi
Cap/Tip	011015"

HVLP:

Air Pressure	4-9 psi
Fluid Pressure	10-12 psi

Reducing Options: Reduce 3-5% to adjust drying or build with Butyl Acetate (R6K18) or MÁK (R6K30).

Retarding Options: Retard 1-3% with 2-Butoxyethanol (R6K25) as required.

Decatalyzation Procedure:

Dilute catalyzed material 100% with uncatalyzed material. This will stabilize this material for 24 hours. Add catalyst for only the uncatalyzed volume the next day. Agitate thoroughly.

Do not save catalyzed material over the weekend.

Cleanup:

Clean tools/equipment immediately after use with Butyl Acetate (R6K18) or MAK (R6K30).

Follow manufacturer's safety recommendations when using any solvent.

ADDITIONAL INFORMATION

- Sher-Wood F3 KemVar Varnish must be catalyzed with 5.0% V66V72 Sher-Wood V66V26 F3 Catalyst or 6.7% Sher-Wood Super KemVar Catalyst. Do not over-catalyze. Do not use any other catalvst
- Sher-Wood F3 KemVar Catalyst is a dark amber colored acid catalyst solution and Super KemVar Catalyst is an acid catalyst solution. To prevent acid corrosion, discoloration and pitting all equipment should be stainless steel. Containers and piping should be stainless steel or plastic.
- Do not use KemVar Catalyst V66V21 with the F3 KemVar Varnish materials.
- V66V21 will cause the F3 KemVar Varnish to acid bloom and crack.
- Color: Sher-Wood F3 KemVar Varnish is not water white and may change the appearance of pigmented basecoats, surfacers, stains, and glazes. This product does yellow when used over white or pastel stains and basecoats. The final color should be approved after applying finish coats of F3 KemVar Note: Each purchase and/or use of products from Varnish to the surface.
- For interior use only.
- application and curing to ensure acceptable coating properties. Coatings cured at lower temperatures are prone to cracking, checking and brittleness.
- Maximum dry film thickness of the coating system is 4.0 dry mils.
- To maintain formaldehvde free status. only recommended solvents may be added. Solvents such as Acetone or EEP contain trace amounts mav of formaldehyde.

Performance Tests:

Cold Checks 20 cycles	pass
Edge Soak	

Household Chemical Test

after the 24 hour test cycle and evaluated.
