COROTHANE I HS ALIPHATIC FINISH COAT is a single

temperature or high humidity applications while providing UV

component, moisture curing urethane designed for low

Low temperature application - down to 20°F (-7°C)

Superior adhesion to most prepared surfaces

PRODUCT INFORMATION

Recommended Uses

Color coat where maximum color and gloss retention are required

Rail

- Suitable for use in the following industries:
 Marine
 Petro-Chem
 - Petro-Chemical
 Pulp and Paper
 - Industrial
 - Bridge and Highway
 - Water and Waste Water
- · Suitable for use in USDA inspected facilities.
- Acceptable for use in Canadian Food Processing facilities categories: D1, D2, D3 (Confirm acceptance of specific part numbers/rexes with your Sherwin-Williams representative)
- Conforms to AWWA D102-03 OCS #2
- · Meets requirements of SSPC Paint 38, Level II

Performance Characteristics

Substrate*: Steel

Surface Preparation*: SSPC-SP6

System Tested*:

APPLICATION BULLETIN

SURFACE PREPARATIONS

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Iron & Steel

Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Commercial Blast Cleaning per SSPC-SP6/NACE 3. For better performance, use Near White Metal Blast Cleaning per SSPC-SP10/NACE 2. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (2 mils / 50 microns). Prime any bare steel the same day as it is cleaned.

Concrete and Masonry

For surface preparation, refer to SSPC-SP13/NACE 6, or ICRI No. 310.2R, CSP 1-3. Surfaces should be thoroughly clean and dry. Concrete and mortar must be cured at least 28 days @ 75°F (24°C). Remove all loose mortar and foreign material. Surface must be free of laitance, concrete dust, dirt, form release agents, moisture curing membranes, loose cement and hardeners. Fill bug holes, air pockets and other voids with Steel-Seam FT910. Primer required.

Follow the standard methods listed below when applicable:

ASTM D4258 Standard Practice for Cleaning Concrete.

ASTM D4259 Standard Practice for Abrading Concrete.

ASTM D4260 Standard Practice for Etching Concrete.

ASTM F1869 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete.

SSPC-SP 13/Nace 6 Surface Preparation of Concrete. ICRI No. 310.2R Concrete Surface Preparation.

Previously Painted Surfaces

If in sound condition, clean the surface of all foreign material. Smooth, hard or glossy coatings and surfaces should be dulled by abrading the surface. Apply a test area, allowing paint to dry one week before testing adhesion. If adhesion is poor, or if this product attacks the previous finish, removal of the previous coating may be necessary. If paint is peeling or badly weathered, clean surface to sound substrate and treat as a new surface as above.

APPLICATION EQUIPMENT

The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compliant with existing VOC regulations and compatible with the existing environmental and application conditions.

Reducer/Clean Up

| Brush/Roll | Reducer #15, R7K15 |
|------------|----------------------------|
| Spray | Aromatic 100 Reducer, R2K5 |
| VOC exempt | R7K111 |

Airless Spray

| Pump | 30:1 |

| Revised: January 19, 2023 APPLICATIC | PERFORMANCE TIPS |
| | Stripe coat all crevices, welds, and sharp angles to prevent early failure in these areas. |
| Surface preparation must be completed as indicated. Mix paint thoroughly prior to use with a low speed power agitator. Filter slowly through a 55 mesh screen. | When using spray application, use a 50% overlap with each pass |
| Apply paint at the recommended film thickness and spreading rate as indicated below: | an application loss factor due to surface profile, roughness or porosity of the surface, skill and technique of the applicator, method |
| Recommended Spreading Rate per coat: Minimum Maximum | of application, various surface irregularities, material lost during mixing, spillage, overthinning, climatic conditions, and excessive film build. |
| Wet mils (microns) 3.5 (88) 5.0 (125) Dry mils (microns) 2.0 (50) 3.0 (75) | Excessive reduction of material can affect film build, appearance, and adhesion. |
| Coverage sq ft/gal (m²/L) 326 (8.0) 489 (12.0) Theoretical coverage sq ft/gal (m²/L) @ 1 mil / 25 microns dft 976 (23.9) 976 (23.9) | In order to avoid blockage of spray equipment, clean equipment before use or before periods of extended downtime with Reducer #15, R7K15. |
| NOTE: Brush or roll application may require multiple coats to achieve maximum film thickness and uniformity of appearance. | Pour a small amount of Reducer #15, R7K15 over the top of the paint in the can to prevent skinning or gelling. |
| Drying Schedule @ 4.0 mils wet (100 microns): | Place a temporary cover over the pail to keep excessive moisture condensation, fog, or rain from contaminating the coating. |
| @ 40°F/4.5°C @ 77°F/25°C @ 100°F/38°C 50% RH | Do not exceed recommended dry film thickness. |
| To touch:5.5 hours2 hours1.5 hoursTo handle:22 hours8 hours5 hoursTo recoat:12 hours6 hours | When applying Corothane I HS Aliphatic Finish Coat over dark colors, Corothane I Zinc Primers, or porous surfaces, an intermediate coat or a minimum of 2 finish coats is required for adequate hide and uniformity of appearance. |
| maximum:14 days14 daysTo cure:7 days3 days3 daysIf maximum recoat time is exceeded, abrade surface before recoating. | E-Z Roll Urethane Defoamer is acceptable for use - see data page for details. |
| Drying time is temperature, humidity, and film thickness dependent. | Corothane KA Accelerator is acceptable for use - see data page for details. |
| Application of coating above maximum or below minimum recommended spreading rate may adversely affect coating | It is recommend that partially used cans not be sealed/closed for use at a later date. |
| performance. | Do not shake beyond two minutes. |
| | Refer to Product Information sheet for additional performance characteristics and properties. |
| | SAFETY PRECAUTIONS |
| | Refer to the SDS sheet before use. |
| Clean spills and spatters immediately with Reducer #15, R7K15. Clean tools immediately after use with Reducer #15, R7K15. Follow manufacturer's | Published technical data and instructions are subject to change without notice Contact your Sherwin-Williams representative for additional technical data and instructions. |
| safety recommendations when using any solvent. | WARRANTY |
