

PHENICON[™] HS **EPOXY PHENOLIC**

Revised 04/2021 Issue 4

PRODUCT INFORMATION

PRODUCT DESCRIPTION

PHENICON HIGH SOLIDS is a VOC-compliant epoxy novolac phenolic coating formulated for use as an internal lining for tanks used to hold crude oil and most refined petroleum products including unleaded gasoline, MTBE, aromatic solvents, and most octane booster blending stocks. Also formulated for secondary containment uses.

- Light Blue contains Opti-Check OAP pigment technology for rapid holiday detection with safe blue light inspection lamps. Chemical Resistant
- Low temperature hardener available for applications from 1.6°C (35°F) minimum to 27°C (80°F) maximum

Recommended Uses

- Internal tank lining for most petroleum products such as: crude oil, unleaded gasoline, most aromatic solvents, motor fuels, alkalies, and brines.
- Secondary containment. Heavy duty exterior structural coating Low temperature hardener not recommended for use at application temperatures above 27°C (80°F) Acceptable for use with cathodic protection systems Nuclear Power Plants

- .
- Nuclear Fower Plants Nuclear fabrication shops DOE Nuclear Fuel Facilities DOE Nuclear Weapons Facilities This product meets specific design requirements for non-safety related nuclear plant applications in Level II, III and Balance of Plant, and DOE nuclear facilities*.

Nuclear qualifications are NRC license specific to the facility. (full compliance with the performance and purity requirements of EI Standard 1541 for Aviation Fuel Storage - replacement for obsolted MIL-PRF-4556F specification) as well as a wide range of solvents.

PERFORMANCE CHARACTERISTICS

Test Name	Test Method	Results
Fuel Contribution*	NFPA 259	5233 btu/lb
Radiation Tolerance*	ASTM D4082-10 (2017)	Pass at 177.5 microns (7.1 mils) & 247.5 microns (9.9 mils)
Surface Burning*	ASTM E84-18b	Flame Spread Index 15; Smoke Development Index 35 (at 312.5 microns or 12.5 mils)

*Substrate: Steel

PHENICON[™] HS **EPOXY PHENOLIC**

Revised 04/2021 Issue 4

APPLICATION BULLETIN

SURFACE PREPARATIONS

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Iron & Steel (immersion service)

Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Near White Metal Blast Cleaning per BS EN ISO 8501-1:2007 Sa21/2. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (50 microns / 2 mils). Remove all weld spatter and round all sharp edges. Prime any bare steel the same day as it is cleaned or before flash rusting occurs.

Iron & Steel (atmospheric service)

Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Commercial Blast Cleaning perBS EN ISO 8501-1:2007 Sa2. For better performance, use Near White Metal Blast Cleaning per ISO 8501-1 Sa21/2. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (50 microns / 2 mils). Prime any bare steel the same day as it is cleaned or before flash rusting occurs.

Concrete and Masonry

For surface preparation, refer to SSPC-SP13/NACE 6, or ICRI No. 310.2, CSP 2-3. Surfaces should be thoroughly clean and dry. Concrete and mortar must be cured at least 28 days @ 24°C (75°F). Remove all loose mortar and foreign material. Surface must be free of laitance, concrete dust, dirt, form release agents, moisture curing membranes, loose cement and hardeners. Fill bug holes, air pockets and other voids with Steel-Seam FT910. Primer required.

Follow the standard methods listed below when applicable:

ASTM D4258-05(2017) Standard Practice for Cleaning Concrete. ASTM D4259/18 Standard Practice for Abrading Concrete. ASTM D4260/05(2017) Standard Practice for Etching Concrete. ASTM F1869-16a Standard Test Method for Measuring Moisture Vapour Emission Rate of Concrete. SSPC-SP 13/Nace 6 Surface Preparation of Concrete.

ICRI No. 310.2 Concrete Surface Preparation.

Concrete. Immersion Service:

For surface preparation, refer to SSPC-SP13/NACE 6, Section 4.3.1 or 1.3.2 or ICRI No. 310.2, CSP 2-3.

Relative humidity: 85% maximum

APPLICATION EQUIPMENT

The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compliant with existing VOC regulations and compatible with the existing environmental and application conditions.

ThinningNot recommended

CleanerNo. 5

Airless Spray:

Pressure	3000 psi minimum
Hose	3/8" - 1/2" ID
Тір	017"021"
Filter	60 mesh

Conventional Spray:

Gun	Binks 95
Tip and Needle	66/65
Air Cap	65 PR
Atomization Pressure	65-75 psi
Fluid Pressure	15-20 psi

Brush:

Brush.....Nylon/Polyester or Natural Bristle

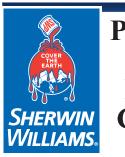

Roller:

If specific application equipment is not listed above, equivalent equipment may be substituted.
