FLUOROKEM™ HS
FLUOROPOLYMER URETHANE

Part A  B65-560  Satin
Part A  B65-570  Semi-Gloss
Part A  B65-580  Gloss
Part B  B65V980  Hardener

PRODUCT INFORMATION

Product Description
FLUOROKEM HS is a premium, ultra-durable ambient cured high solids fluoropolymer urethane finish. Provides unparalleled color and gloss performance, even in the most severe exposures.

- Superior exterior durability
- Fast dry
- Graffiti resistant
- Chemical and abrasion resistant
- Airless, conventional spray, and brush and roll application
- Ambient temperature cure

PRODUCT CHARACTERISTICS

Finish:
- Satin, 15-25 units @ 60 degrees
- Semi-Gloss, 50-60 units @ 60 degrees
- Gloss, 80+ units @ 60 degrees

Color:
Wide range of colors available

Volume Solids:
60% ± 2% (mixed, may vary by color)

Weight Solids:
77% ± 2% (mixed, may vary by color)

VOC (EPA Method #24):
<340 g/L; <2.8lb/gal, mixed

Mix Ratio:
4:1 by volume

Recommended Spreading Rate per coat:

<table>
<thead>
<tr>
<th>Wet mils (microns)</th>
<th>Minimum</th>
<th>Maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.5 (90)</td>
<td>5.0 (125)</td>
<td></td>
</tr>
</tbody>
</table>

Dry mils (microns)

- 2.0 (50)
- 3.0 (75)

Coverage sq ft/gal (m²/L)

- 321 (7.9)
- 481 (11.8)

Theoretical coverage sq ft/gal (m²/L) @ 1 mil / 25 microns dft
960 (23.5)

NOTE: Brush or roll application may require multiple coats to achieve maximum film thickness and uniformity of appearance.

Drying Schedule @ 4.0 mils wet (100 microns):

- @ 50°F/10°C  @ 77°F/25°C  @ 120°F/49°C
- 50% RH

To touch:
- 6 hours
- 2 hours
- 1 hour

To handle:
- 24 hours
- 4 hours
- 2 hours

To recoat:
- minimum: 24 hours
- maximum: 45 days

To cure:
- 7 days

Pot Life:
- 4 hours
- 2 hours
- 30 minutes

NOTE: If maximum recoat time is exceeded, abrade surface before recoating. Drying time is temperature, humidity, and film thickness dependent.

Adhesion:
ASTM D4541 2,655 psi

Direct Impact Resistance:
ASTM G14 80 in. lbs.

Dry Heat Resistance:
ASTM D2485 200°F (93°C)

Flexibility:
ASTM D522, 180° bend, 1/8” mandrel Passes

Pencil Hardness:
ASTM D3363 HB

Recommended Uses
Interior or exterior exposure where extreme weather durability is required.

- Water tanks
- Storage tank exteriors
- Bridges
- Marine
- Municipal building
- High visibility areas
- Fascias
- A component of INFINITANK

Performance Characteristics

Substrate*: Steel

Surface Preparation*:
SSPC-SP10/NACE 2

System Tested*:
Primer: Macropoxy 646 @ 6.0 mils (150 microns) dft
Finish: FluoroKem HS @ 2.5 mils (63 microns) dft

Test Name  Test Method  Results
Adhesion  ASTM D4541  2,655 psi

Direct Impact Resistance (topcoat only)  ASTM G14  80 in. lbs.

Dry Heat Resistance (topcoat only)  ASTM D2485  200°F (93°C)

Flexibility (topcoat only)  ASTM D522, 180° bend, 1/8” mandrel  Passes

Pencil Hardness (topcoat only)  ASTM D3363  HB

If maximum recoat time is exceeded, abrade surface before recoating. Drying time is temperature, humidity, and film thickness dependent.

Shelf Life:
12 months, unopened
Store indoors at 40°F (4.5°C) to 100°F (38°C).

Flash Point:
<60°F (16°C), PMCC, mixed

Reducer:
R7K111(VOC exempt), as needed up to 5%

Clean Up:
R7K15

</tbody>
</table>

**Surface Preparation**

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Refer to product Application Bulletin for detailed surface preparation information.

Minimum recommended surface preparation:

- Iron & Steel: SSPC-SP6/NACE 3
- Concrete & Masonry: SSPC-SP13/NACE 6 or ICRI No. 310.2R, CSP 1-3
- Prime with recommended primers as needed.

**Tinting**

Do not tint.

Color: Wide range of colors available

**Application Conditions**

Temperature: 40°F (4.5°C) minimum, 120°F (49°C) maximum (Air, surface, and material)

Relative humidity: 5°F (2.8°C) above dew point 85% maximum

Refer to product Application Bulletin for detailed application information.

Premeasured components.

Weight (varies by color): 9.7-12.9 ± 0.2 lb/gal; 1.16-1.55 Kg/L

**Safety Precautions**

Refer to the SDS sheet before use.

Published technical data and instructions are subject to change without notice. Contact your Sherwin-Williams representative for additional technical data and instructions.

**Warranty**

The Sherwin-Williams Company warrants our products to be free of manufacturing defects in accord with applicable Sherwin-Williams quality control procedures. Liability for products proven defective, if any, is limited to replacement of the defective product or the refund of the purchase price paid for the defective product as determined by Sherwin-Williams. NO OTHER WARRANTY OR GUARANTEE OF ANY KIND IS MADE BY SHERWIN-WILLIAMS, EXPRESSED OR IMPLIED, STATUTORY, BY OPERATION OF LAW OR OTHERWISE, INCLUDING MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.
Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Iron & Steel
Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Commercial Blast Cleaning per SSPC-SP6/NACE 3. For better performance, use Near White Metal Blast Cleaning per SSPC-SP10/NACE 2. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (1-2 mils / 25-50 microns). Prime any bare steel the same day as it is cleaned or before flash rusting occurs. Primer Required.

Concrete and Masonry
For surface preparation, refer to SSPC-SP13/NACE 6, or ICRI No. 310.2R, CSP 1-3. Surfaces should be thoroughly clean and dry. Concrete and mortar must be cured at least 28 days @ 75°F (24°C). Remove all loose mortar and foreign material. Surface must be free of laitance, concrete dust, dirt, form release agents, moisture curing membranes, loose cement and hardeners. Fill bug holes, air pockets and other voids with Steel-Seam FT910. Primer required.

Follow the standard methods listed below when applicable:
ASTM D4258 Standard Practice for Cleaning Concrete.
ASTM D4259 Standard Practice for Abrading Concrete.
ASTM D4260 Standard Practice for Etching Concrete.
ASTM F1869 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete.
SSPC-SP 13/Nace 6 Surface Preparation of Concrete.
ICRI No. 310.2R Concrete Surface Preparation.

Application Conditions
Temperature: 40°F (4.5°C) minimum, 120°F (49°C) maximum
(Air, surface, and material)
At least 5°F (2.8°C) above dew point
Relative humidity: 85% maximum

Application Equipment
The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compliant with existing VOC regulations and compatible with the existing environmental and application conditions.

Reducer: R7K111, as needed up to 5%
Clean Up: R7K15

Conventional Spray
Gun............... Model 95 Binks
Tip................ 67
Needle............. 667
Air Cap........... 67PB
Atomization Pressure..... 45 – 55 psi
Fluid Pressure......... 15 - 20 psi

HVLP (Spray Pot)
Gun............... Binks Mach 1 SL
Tip................ 92
Needle............. ABSS
Air Cap........... 95 AP
Atomization Pressure..... 50 psi
Fluid Pressure......... 20 psi

Air Assisted Airless
Pump................Graco 30:1 President
Gun............... Graco Air-Assisted Gun
Tip................ 411
Atomization Pressure..... 30 psi
Fluid Pressure......... 60 psi

Airless Spray
Pressure............... 1500 – 2200 psi
Hose................ ½ in D
Tip................... 013 “ -.015”
Filter................ 60 mesh

Brush
Brush............. Natural Bristle

Roller
Cover............... 3/8” woven with solvent resistant core

If specific application equipment is not listed above, equivalent equipment may be substituted.
**APPLICATION PROCEDURES**

Surface preparation must be completed as indicated.

Mix contents of each component thoroughly with low speed power agitation. Make certain no pigment remains on the bottom of the can. Then combine 4 parts by volume of Part A with 1 part by volume of Part B. Thoroughly agitate the mixture with slow speed power agitation for 2-3 minutes.

If reducer solvent is used, add only after both components have been thoroughly mixed.

Apply paint at the recommended film thickness and spreading rate as indicated below:

<table>
<thead>
<tr>
<th>Wet mils (microns)</th>
<th>Dry mils (microns)</th>
<th>Coverage sq ft/gal (m²/L)</th>

</tbody>
</table>

If maximum recoat time is exceeded, abrade surface before recoating. Drying time is temperature, humidity, and film thickness dependent.

Application of coating above maximum or below minimum recommended spreading rate may adversely affect coating performance.

**CLEAN UP INSTRUCTIONS**

Clean spills and spatters immediately with R7K15. Clean tools immediately after use with R7K15. Follow manufacturer’s safety recommendations when using solvent.

**DISCLAIMER**

The information and recommendations set forth in this Product Data Sheet are based upon tests conducted by or on behalf of The Sherwin-Williams Company. Such information and recommendations set forth herein are subject to change and pertain to the product offered at the time of publication. Consult your Sherwin-Williams representative to obtain the most recent Product Data Information and Application Bulletin.

**APPLICATION BULLETIN**

**Performance Tips**

When using spray application, use a 50% overlap with each pass of the gun to avoid holidays, bare areas, and pinholes. If necessary, cross spray at a right angle.

Spreading rates are calculated on volume solids and do not include an application loss factor due to surface profile, roughness or porosity of the surface, skill and technique of the applicator, method of application, various surface irregularities, material lost during mixing, spillage, over thinning, climate conditions, and excessive film build.

Excessive reduction of material can affect film build, appearance, and adhesion.

Do not apply the material beyond recommended pot life.

Do not mix previously catalyzed material with new.

In order to avoid blockage of spray equipment, clean equipment before use or before periods of extended down time with R7K15.

Drying time is temperature, humidity, and film thickness dependent.

Always test adhesion by applying a test patch of 2-3 square feet. Allow to dry one week before checking adhesion.

This product is moisture sensitive. Avoid moisture contamination.

Temperatures above 77°F (25°C) will shorten pot life.

Refer to Product Information sheet for additional performance characteristics and properties.

**SAFETY PRECAUTIONS**

Refer to the SDS sheet before use.

Published technical data and instructions are subject to change without notice. Contact your Sherwin-Williams representative for additional technical data and instructions.

**WARRANTY**

The Sherwin-Williams Company warrants our products to be free of manufacturing defects in accord with applicable Sherwin-Williams quality control procedures. Liability for products proven defective, if any, is limited to replacement of the defective product or the refund of the purchase price paid for the defective product as determined by Sherwin-Williams. NO OTHER WARRANTY OR GUARANTEE OF ANY KIND IS MADE BY SHERWIN-WILLIAMS, EXPRESSED OR IMPLIED, STATUTORY, BY OPERATION OF LAW OR OTHERWISE, INCLUDING MERCHANDABILITY AND FITNESS FOR A PARTICULAR PURPOSE.
