**PRODUCT INFORMATION**

**POLY-GLASS™ POLYESTER LAMINATE SYSTEM**

**PART A** 939 SERIES POLYESTER RESIN
**PART B** 531-0-006 CATALYST MEK PEROXIDE RED
**PART B** 531-0-001 CATALYST MEK PEROXIDE CLEAR
**PART B** 530-0-001 GLASS MAT
**PART B** 970-C-949 WAX SOLUTION

---

**PRODUCT DESCRIPTION**

POLY-GLASS reinforced polyester resin is a chemically resistant isophthalic polyester formulated specifically for lining the bottoms of steel storage tanks used to contain crude oil and a wide range of refined petroleum products including lubricants, heating oil, diesel fuel, and leaded and select unleaded gasoline. Reinforced with a fiberglass mat, Poly-Glass provides an economical alternative to a new steel bottom and guards against product loss through leakage and water or ground contamination.

**PRODUCT CHARACTERISTICS**

**Finish:** Gloss

**Color:** Clear, Pink or Green

**Volume Solids:** 100% ± 2%, theoretical

Note: Poly-Glass is a 100% reactive material, theoretically. However, some shrinkage will occur in application due to styrene evaporation as well as normal spray losses. Resulting practical volume solids will be approximately 75%.

**VOC (calculated):** <50 g/L; 0.42 lb/gal, mixed

**Mix Ratio:**
Use MEK Peroxide catalyst at the rate of 1½ fluid ounces per gallon (3.78L) of Part A. See Application Bulletin.

**Recommended Spreading Rate:**
For each 100 square feet of surface area, the approximate requirements are:
- 4 gallons of Resin 939 Series (36 lb)
- 10.5 lbs of glass mat
- 6 ounces of MEK Peroxide

Recommended DFT of first coat (40-45 mils / 1000-1125 microns)
Recommended DFT of gel coat (wax containing topcoat) 15-20 mils (375-500 microns)

Gel Coat: approximately 2 gallons (7.56L) of Resin (18 lb) per 100 sq ft

**Drying Schedule:**
- @ 77°F/25°C
- 50% RH
- To touch: 1 hour
- To recoat: When Barcol hardness test reaches 30+
- Full cure: 24-48 hours

*Drying time is temperature, humidity, and film thickness dependent.

**Pot Life (1.5 oz MEK Peroxide catalyst):**
- @ 70°F/21°C
- @ 77°F/25°C
- @ 80°F/27°C
- @ 85°F/29°C

- 37 minutes
- 25 minutes
- 15 minutes
- 12 minutes

**Sweat-in-time:** Not required

**Shelf Life:**
- 3 months, unopened
- Store indoors at 77°F (25°C).

**Flash Point:**
87°F (30°C), PMCC, mixed

**Reducer:** Not recommended

**Clean Up:**
MEK, R6K10

---

**RECOMMENDED USES**

- As an interior lining for storage tanks containing crude oil and refined petroleum products
- As a lining system for secondary containment applications
- Economical alternative to new steel tank bottom

**Performance Characteristics**

**Resistance Guide**

**Immersion**
- (Ambient temperature)

- Crude oil: Recommended
- Diesel fuel: Recommended
- Lubricating oils: Recommended
- Fuel oils: Recommended
- Aromatic solvents: Not Recommended
- Hi-aromatic gasoline: Not Recommended
- Ethanol gasohol: Not Recommended
- MTBE, ETBE, TAME: Recommended
- Ether/fuel blends (reformed gas): Not Recommended
- Acids: Recommended*
- Methanol/methanol blends: Not Recommended

**Secondary Containment**
- (Immersion service up to 72 hours)

- Crude oil: Recommended
- Diesel fuel: Recommended
- Lubricating oils: Recommended
- Fuel oils: Recommended
- Aromatic solvents: Recommended
- Hi-aromatic gasoline: Recommended
- Ethanol gasohol: Recommended
- MTBE, ETBE, TAME: Recommended
- Ether/fuel blends (reformed gas): Not Recommended
- Dilute acids: Recommended
- Methanol/methanol blends: Not Recommended

* Consult your Sherwin-Williams representative for specific application, temperature, concentration, and exposure recommendations.

---

*continued on back*
**Surface Preparation**

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Refer to product Application Bulletin for detailed surface preparation information.

Minimum recommended surface preparation:

- **Iron & Steel:**
  - Immersion: SSPC-SP10/NACE2, 2-3 mil (50-75 micron) profile

- **Concrete & Masonry:**
  - Immersion: SSPC-SP13/NACE 6, or ICRI No. 310.2R, CSP 4-6

- *Primer/Filler required

### Application Conditions

- **Temperature:** 60°F (16°C) minimum, 110°F (43°C) maximum (air, surface, material)
- **Relative humidity:** At least 5°F (2.8°C) above dew point
- **Relative humidity:** 85% maximum

Refer to product Application Bulletin for detailed application information.

### Ordering Information

- **Packaging:**
  - Part A: 53 gallon (200L) drum
  - Part B: 1 gallon (3.78L) MEK Peroxide
  - Wax Solution: 1 gallon (3.78L)
  - Glass Mat: approximately 97 lbs per roll
  - Weight: ~9.0 lb/gal; ~1.1 Kg/L

### Safety Precautions

Refer to the MSDS sheet before use.

Published technical data and instructions are subject to change without notice. Contact your Sherwin-Williams representative for additional technical data and instructions.

### Warranty

The Sherwin-Williams Company warrants our products to be free of manufacturing defects in accord with applicable Sherwin-Williams quality control procedures. Liability for products proven defective, if any, is limited to replacement of the defective product or the refund of the purchase price paid for the defective product as determined by Sherwin-Williams. NO OTHER WARRANTY OR GUARANTEE OF ANY KIND IS MADE BY SHERWIN-WILLIAMS, EXRESSED OR IMPLIED, STATUTORY, BY OPERATION OF LAW OR OTHERWISE, INCLUDING MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

POLY-Glass™ POLYESTER LAMINATE SYSTEM

**APPLICATION BULLETIN**

TRM.50

Revised February 08, 2016

**SURFACE PREPARATIONS**

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

**Iron & Steel (immersion service)**

Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Near White Metal Blast Cleaning per SSPC-SP10/NACE 2. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (2-3 mils / 50-75 microns). Remove all weld spatter and round all sharp edges. Prime any bare steel the same day as it is cleaned or before flash rusting occurs.

Prime all blast-cleaned surface with Corobond Vinyl Ester Primer, applied at a dry film thickness of 2.0-3.0 mils (50-75 microns). Apply Poly-Glass Polyester Putty to fill corrosion pits along floor and shell lap joints, and in the corner chine to a 3 inch radius (as needed). See Technical Resource Manual for treatment of leg support pads.

**Concrete and Masonry**

For surface preparation, refer to SSPC-SP13/NACE 6, or ICRI No. 310.2R, CSP 4-6. Surfaces should be thoroughly clean and dry. Concrete and mortar must be cured at least 28 days @ 75°F (24°C). Remove all loose mortar and foreign material. Surface must be free of laitance, concrete dust, dirt, form release agents, moisture curing membranes, loose cement and hardeners. Fill bug holes, air pockets and other voids with Steel-Seam FT910. Primer required. If surface deterioration presents an unacceptably rough surface, prime with Corobond Vinyl Ester Primer. Patch and resurface with Poly-Glass Putty. Fill all cracks, voids and bugholes with Poly-Glass Putty (over Corobond Vinyl Ester Primer).

**Follow the standard methods listed below when applicable:**

ASTM D4258 Standard Practice for Cleaning Concrete.

ASTM D4259 Standard Practice for Abrading Concrete.

ASTM D4260 Standard Practice for Etching Concrete.

ASTM F1869 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete.

SSPC-SP 13/Nace 6 Surface Preparation of Concrete.

ICRI No. 310.2R Concrete Surface Preparation.

**Concrete, Immersion Service:**

For surface preparation, refer to SSPC-SP13/NACE 6, Section 4.3.1 or 1.3.2 or ICRI No. 310.2R, CSP 4-6.

**Application Conditions**

| Temperature: | 60°F (16°C) minimum, 110°F (43°C) maximum (air, surface, material) At least 5°F (2.8°C) above dew point |
| Relative humidity: | 85% maximum |

**Equipment**

External mix airless catalyst injection system. Equipment includes 30:1 airless pump with Binks Catalyst Tank, and siphon tube with Binks gun mounted on portable cart with all necessary regulators, hoses, and fittings.

Tip Orifice...............043 -.052
Fan Width at 12".............40°
Fluid Pressure...............2000-2400 psi
Filter Screen...............60 mesh

Consult your Sherwin-Williams representative for further information.

If specific application equipment is not listed above, equivalent equipment may be substituted.
# Application Bulletin

## Application Procedures

Surface preparation must be completed as indicated.

**Mixing Instructions:**
Add MEK Peroxide Catalyst, Part B, at the rate 1 1/2 fluid ounces per gallon of Part A with catalyst injection system. Acceptable catalyst range is 1 1/2-2 1/2 oz/gal, depending on environmental conditions.

For final gel only, add Wax Solution at the rate of 2 gallons (7.56L) per drum (before adding catalyst) to Part A. Mix thoroughly with a Jiffy Mixer. Then add Part B, MEK Peroxide Catalyst, through catalyst injection.

Measure a section of the floor or shell to be covered by a segment of 1/2 oz. glass mat roll. Apply catalyzed resin at the rate of 4 gallon (15.1L) per 100 sq ft. Apply in a continuous film.

Immediately apply glass mat. Saturate the mat by rolling with an aluminum or plastic grooved roller to work out the air bubbles. Apply additional resin as necessary to saturate the glass mat (DO NOT FLOOD). Remove air bubbles and any excess resin from the glass mat by working with a roller.

Prior to gel coat application, check laminate for full cure with a Barcol 934 Hardness Tester. The reading should be 30-40 after 24 hours at a minimum temperature of 60°F (16°C). Take film thickness reading for proper film thickness and continuity. Inspect for holidays using a 3000 volt spark detector. Repair any pinholes or voids. Repeat Barcol hardness test. Apply wax containing gel coat at a rate of 4 gallon (15-20 mls) wet film thickness.

After gel coat has cured, repeat Barcol hardness test and inspect for holidays using a 5000 volt spark type detector. Repair any pinholes. Repeat Barcol hardness test.

Apply paint at the recommended film thickness and spreading rate as indicated below:

## Application Bulletin

### Application Bulletin

**Application Procedures**

Surface preparation must be completed as indicated.

**Mixing Instructions:** Add MEK Peroxide Catalyst, Part B, at the rate 1 1/2 fluid ounces per gallon of Part A with catalyst injection system. Acceptable catalyst range is 1 1/2-2 1/2 oz/gal, depending on environmental conditions.

For final gel only, add Wax Solution at the rate of 2 gallons (7.56L) per drum (before adding catalyst) to Part A. Mix thoroughly with a Jiffy Mixer. Then add Part B, MEK Peroxide Catalyst, through catalyst injection.

Measure a section of the floor or shell to be covered by a segment of 1/2 oz. glass mat roll. Apply catalyzed resin at the rate of 4 gallon (15.1L) per 100 sq ft. Apply in a continuous film.

Immediately apply glass mat. Saturate the mat by rolling with an aluminum or plastic grooved roller to work out the air bubbles. Apply additional resin as necessary to saturate the glass mat (DO NOT FLOOD). Remove air bubbles and any excess resin from the glass mat by working with a roller.

Prior to gel coat application, check laminate for full cure with a Barcol 934 Hardness Tester. The reading should be 30-40 after 24 hours at a minimum temperature of 60°F (16°C). Take film thickness reading for proper film thickness and continuity. Inspect for holidays using a 3000 volt spark detector. Repair any pinholes or voids. Repeat Barcol hardness test. Apply wax containing gel coat at a rate of 4 gallon (15-20 mls) wet film thickness.

After gel coat has cured, repeat Barcol hardness test and inspect for holidays using a 5000 volt spark type detector. Repair any pinholes. Repeat Barcol hardness test.

Apply paint at the recommended film thickness and spreading rate as indicated below:

### Recommended Spreading Rate:

For each 100 square feet of surface area, the approximate requirements are:

- 4 gallons of Resin 939 Series (36 lb)
- 10.5 lbs of glass mat
- 6 ounces of MEK Peroxide

Recommended DFT of first coat (40-45 mils / 1000-1125 microns) Recommended DFT of gel coat (wax containing topcoat) 15-20 mils (375-500 microns) Gel Coat: approximately 2 gallons (7.56L) of Resin (18 lb) per 100 sq ft

### Drying Schedule:

- **To touch:** 1 hour
- **To recoat:** When Barcol hardness test reaches 30+
- **Full cure:** 24-48 hours

*Drying time is temperature, humidity, and film thickness dependent.*

### Pot Life (1.5 oz MEK Peroxide catalyst):

- 70°F/23°C: 37 minutes
- 77°F/25°C: 25 minutes
- 80°F/27°C: 15 minutes
- 85°F/29°C: 12 minutes

### Sweat-in-time:

- Not required

Application of coating above maximum or below minimum recommended spreading rate may adversely affect coating performance.
