

# Industrial Wood Coatings CC-F24

# SHER-WOOD<sup>®</sup> Water White Conversion Varnish

# DESCRIPTION

#### SHER-WOOD® Water White Conversion

Varnish is a catalyzed wood finishing system providing water white color and good resistance to yellowing. It is recommended for use over white "pickled" and light color stains where good resistance to yellowing is required.

#### Advantages:

- · Excellent clarity
- UV absorber added providing good resistance to yellowing
- High Build 35% volume solids
- Meets test requirements of the Kitchen Cabinet Manufacturers Association (KCMA) for finishes
- · Excellent toughness and mar resistance
- · Excellent moisture resistance
- Excellent resistance to household chemicals
- Excellent cold check resistance
- Meets AWI system 5 for Conversion Varnish
- Self-sealing use the same product as a sealer
- Process efficient many three coat applications can be done in two coats because of its high solids and high build
- Good "hang" on vertical surfaces
- Ideal for kitchen cabinets, vanities, chairs, office furniture, and a wide range of interior wood products

# Air Quality Data (Theoretical):

- · Photochemically reactive
- Volatile Organic Compounds (VOC)
   Theoretical as packaged, maximum, less exempt solvents: 4.40 lb/gal, 528 g/L
- Volatile Organic Compounds (VOC)
   Catalyzed and reduced 15% with R6K18:
   4.78 lb/gal, 573 g/L less exempts
- Volatile Hazardous Air Pollutants
   (VHAPS) catalyzed and reduced 15%
   with Butyl Acetate R6K18: 0.54 lb/lb of solids

VOC compliance limits vary from state to state; please consult local Air Quality rules and regulations

An Environmental Data Sheet is available from your local Sherwin-Williams facility, or at www.paintdocs.com.

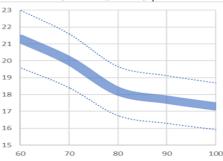

# **CHARACTERISTICS**

Gloss: Gloss 85+ units BRE 55-59 units MRE 34-38 units

DRE 17-21 units Volume Solids:  $35 \pm 1\%$ 

#### Package Viscosity:

17-22 seconds #2 Zahn Cup 14-18 seconds #4 Ford Cup

The above chart is for information only and should not be used as product specifications

#### Recommended film thickness:

Mils Wet 2.5 - 4.0 Mils Dry 0.8 - 1.2

Spreading Rate (no application loss) 460-690 sq ft/gal @ 0.8-1.2 mils DFT

Drying (1.5 mils, 77°F, 50% RH):

To Touch: 10-15 minutes
To Handle: 15-30 minutes
To Sand: 30-60 minutes
To Recoat: 30-60 minutes

Coating must be applied and dried at a temperature of 70°F or higher to ensure acceptable

coating properties

Force Dry: 5-20 minutes at 110-160°

Flash Point: 40°F PMCC

Package Life: 24 months, unopened

Testing: The information, data, and recommendations set forth in this Product Data Sheet are based upon test results believed to be reliable. However, due to the wide variety of substrates, substrate properties, surface preparation methods, equipment and tools, application methods, and environments, the customer should test the complete system for adhesion, compatability and performance prior to full scale application.

# **CHARACTERISTICS**

#### Mixing Ratio, Sealer:

### Catalyze

1 part Conversion Varnish 3% (3.84 oz/gal) V66V21 (by volume)

Or

10% (12.8 oz/gal) V66V20005 (by volume) V66V20006 V66V20007

Reduce 15% Butyl Acetate (R6K18)

#### Mixing Ratio, Topcoat:

#### Catalyze

1 part Conversion Varnish 3% (3.84 oz/gal) V66V21 (by volume)

Or

10% (12.8 oz/gal) V66V20005 (by volume) V66V20006 V66V20007

Reduce 5% Butyl Acetate (R6K18)

Pot Life: 24 hours

#### **SPECIFICATIONS**

#### Surface preparation:

Wood - New Work (interior only): Must be clean, dry, and finish sanded. Substrate should be free of grease, oil, dirt, fingerprints, and any contamination to ensure optimum adhesion and coating performance properties. Moisture content of wood should be 6 to 8%.

**Previously finished wood** (interior only): Strip old finishes completely and remove all contaminants from the surface. Make sure surface is dry. Finish as new work.

# Finishing System:

- 1. Sealer Catalyze and reduce Varnish as a sealer. Spray a full wet coat. Air dry 30 minutes or force dry 5-20 minutes at 110-160°F. Note: Sher-Wood Vinyl Sealers T67F3. T67F5 and T67F6 may also be used as a sealer under Water White Conversion Varnish. These sealers must be catalyzed when used under Sher-Wood catalyzed topcoats. Consult the corresponding sealer data page for details.
- Sand Sand with 220-280 grit paper, remove sanding dust.
- Topcoat Catalyze Sher-Wood Water White Conversion Varnish as a topcoat. For more depth, apply a second coat.
- Dry Allow overnight dry before packing or stacking. Force drying may be used.
- 5.Maximum dry film thickness of the system must not exceed 4 mils because heavier films may cause cracking.

# APPLICATION

#### **Conventional Spray:**

Air Pressure	40-50 psi
Fluid Pressure	6-8 psi
Airless Spray:	·
Pressure	
Tip	011015"
Air Assisted Airless:	
Assist Air Pressure	10-25 psi
Fluid Pressure	
Can/Tin	011- 015"

#### Reduction:

Reduce with Butyl Acetate R6K18, MAK R6K30 or HAPS Free Lacquer Thinner R7K305 to maintain HAPS compliance. Toluene, Xylene or High Flash Naphtha 100 may also be used, but are not HAPS compliant. Acetone R6K9 can be used as a HAPS and VOC exempt solvent.

Retard: MAK R6K30 and EEP R6K35 can be used to retard the coating system and maintain low HAPS.

#### Cleanup:

Clean tools/equipment immediately after use with Butyl Acetate, R6K18 or HAPS Free Lacquer Thinner R7K305.

Follow manufacturer's safety recommendations when using any solvent.

# **SPECIFICATIONS**

#### Performance Tests:

Cold Check Resistance	20 cycles
Print Resistance	No print
18 hours air dry, at 2 psi at 77°F in	direct .
contact with 8 oz duck cloth	

#### **Household Chemicals Test**

Panels were aged 30 days at 77°F, 5 drops of each item were placed under a watch glass for one hour. Film was rinsed with water, washed with warm water and soap, dried, and wiped with VM&P Naphtha to remove items not removed with water

removed with water.

# SPECIFICATIONS(cont)

- SHER-WOOD® Water White Conversion Varnish must be catalyzed 3% with SHER-WOOD® KEMVAR® Catalyst V66V21 or 10% with V66V101, V66V102, V66V103, V66V20005, V66V20006 or V66V20007 Do not over catalyze. Do not use any other catalyst.
- Do not use over conventional nitrocellulose lacquei sealers. Seal with SHER-WOOD® Vinyl Sealers T67F3, T67F5 or T67F6 catalyzed, or conversion
- V66V21, V6V101, V66V102, V66V103, V66V20005, V66V20006 and V66V20007 are acids. To preven acid corrosion and pitting, all equipment should be made of stainless steel. Containers and piping should be stainless steel or plastic.
- For interior use only.
- · For laboratory furniture and the best chemical resistance properties, Super KEMVAR® "M" should
- While catalyzed varnish remains a low viscosity liquid**|Note**: All purchases of products from Sherwin- Williams The resultant film may have inferior cure and conditions prior to the purchase of the products. crosslinking and a tendency for long-term cold checkina
- To extend the use life at the end of the day, add 300 400% of uncatalyzed material. Add catalyst based only on the uncatalyzed portion when ready to use the next day. Refrigeration also extends the working pot-life
- Do not use in recirculating systems such as flow coater or curtain coater equipment. Recirculating paint lines are acceptable
- Temperature must be above 70°F during application and cure to ensure acceptable Liability for products proven to be defectively
- Maximum dry film thickness of the coating system is
