DURA-PLATE UHS PRIMER is an ultra high solids epoxy amine formulated specifically as a primer for use under Dura-Plate UHS topcoat. For use in immersion service in ballast tanks, oil tanks, and refined fuel storage tanks.

Dura-Plate UHS Primer provides excellent surface wetting and adhesion properties, especially over rust pitted steel surfaces.

- Airless Spray
- Low odor
- High flash point, >200°F (93°C)
- Low Temperature Hardener for applications from 40°F to 77°F (4.5°C to 25°C).
- NSF approved to Standard 61 for potable water (tanks of 1000 gallons or greater and pipes of 40” diameter or greater. )
- Suitable for use in Canadian Food Processing facilities categories:
  - • Suitable for use in the Mining & Minerals Industry
  - B62L210 Blue contains OAP fluorescent pigment (NSF Approved)
  - Conforms to AWWA D102, ICS #1, ICS#2, OCS#5
  - Suitable for use with cathodic protection systems
  - Containment areas
  - Ballast tank interiors
  - Potable water tanks and pipes
  - Oil storage tank interiors, and refined fuel storage tank interiors
  - Water and waste treatment plants
  - Conform to AWWA D102, ICS #1, ICS#2, OCS#5
  - B62L210 Blue contains OAP fluorescent pigment (NSF Approved)
  - D4 (Confirm acceptance of specific part numbers/recipes with your SW Sales Representative)

Recommended Uses
For use over prepared steel or concrete surfaces in industrial and marine exposures such as:
- Meets MIL-PRF-23236, Type VII, Class 5, 7, 9 and 11, Grade C
- Ballast tank interiors
- Potable water tanks and pipes
- Oil storage tank interiors, and refined fuel storage tank interiors
- Water and wastewater treatment plants
- Containment areas
- Suitable for use with cathodic protection systems
- Conforms to AWWA D102, ICS #1, ICS#2, OCS#5
- B62L210 Blue contains OAP fluorescent pigment (NSF Approved)
- Suitable for use in the Mining & Minerals Industry
- Acceptable for use in Canadian Food Processing facilities categories:
  - D4 (Confirm acceptance of specific part numbers/recipes with your SW Sales Representative)

*unless otherwise noted below
**Product Information**

**Recomended Systems**

**Steel, NSF System:**
- *AWWA D102: Inside Coating System No. 1* minimum AWWA DFT
  - 1 ct. Dura-Plate UHS Primer 3.0** (75)
  - 1 ct. Dura-Plate UHS 5.0 (150)

*AWWA D102: Inside Coating System No. 2* minimum AWWA DFT
- 1 ct. Dura-Plate UHS Primer 3.0** (75)
- 1 ct. Dura-Plate UHS 4.0 (100)
- 1 ct. Dura-Plate UHS 5.0 (125)

*AWWA D102-03: Outside Coating System No. 5* minimum AWWA DFT
- recommended DFT 8.0-10.0 (200-250)
- 1 ct. Dura-Plate UHS Primer 2.0** (50)
- 1 ct. Dura-Plate UHS 2.0 (50)
- 1 ct. Acrolon 218HS 2.0 (50)

**Steel:**
- 1 ct. Dura-Plate UHS Primer 4.0-8.0** (100-200)
- 1 ct. Dura-Plate UHS 10.0-12.0 (250-300)

**Steel, Laminant System:**
- 1 ct. Dura-Plate UHS Primer 1.0-1.5** (25-40)
- 1 ct. Steel-Seam FT910 as required for filling pits, and transitioning sharp edges, weld seams, etc.
- 1 ct. Dura-Plate UHS Clear Laminant Resin with 1½ oz. glass mat 40.0-45.0 (1000-1125)
- 1 ct. Dura-Plate UHS 10.0-12.0 (250-300)

**Concrete/ Masonry:**
- 1 ct. Corobond 100 Epoxy Primer/Sealer 4.0-6.0 (100-150)

Other acceptable topcoats:

*Dura-Plate UHS Primer can also be applied to concrete as a primer.

**When using an OAP fluorescent pigment system, use the B62L210 Primer, with a non-OAP Containing Dura-Plate UHS topcoat color.

The systems listed above are representative of the product's use, other systems may be appropriate.

**Disclaimer**

The information and recommendations set forth in this Product Data Sheet are based upon tests conducted by or on behalf of The Sherwin-Williams Company. Such information and recommendations set forth herein are subject to change and pertain to the product offered at the time of publication. Consult your Sherwin-Williams representative to obtain the most recent Product Data Information and Application Bulletin.

**Surface Preparation**

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Refer to product Application Bulletin for detailed surface preparation information.

**Minimum recommended surface preparation:**

- **Iron & Steel:**
  - Atmospheric: SSPC-SP6/NACE 3, 2 mil (50 micron) profile or SSPC-SP12/NACE No. 5, WJ-3/NV-2
  - Immersion: SSPC-SP10/NACE2, 2 mil (50-75 micron) profile or SSPC-SP12/NACE No. 5, WJ-2/NV-2

- **Concrete & Masonry:**
  - Atmospheric: SSPC-SP13/NACE 6, or ICRI No. 310.2R CSP 2-3
  - Immersion: SSPC-SP13/NACE 6-4.3.1 or 4.3.2, or ICRI No. 310.2R CSP 2-3

**Surface Preparation Standards**

- **Condition of Surface**
  - **ISO 8501-1**: Sa2.5, Sa2.5
  - **SIS055900 SSPC NACE**
  - **SSPC-SP10/NACE2, 2 mil (50 micron)**
  - **SSPC-SP12/NACE No. 5, WJ-3/NV-2**
  - **Steel-Seam FT910 as required for filling pits, and transitioning sharp edges, weld seams, etc.**
  - **Concrete/ Masonry:**
    - **SSPC-SP6/NACE 3, 2 mil (50 micron) profile or SSPC-SP12/NACE No. 5, WJ-3/NV-2**
    - **Immersion: SSPC-SP10/NACE2, 2 mil (50-75 micron) profile or SSPC-SP12/NACE No. 5, WJ-2/NV-2**
    - **Concrete & Masonry:**
      - **Atmospheric: SSPC-SP13/NACE 6, or ICRI No. 310.2R CSP 2-3**
      - **Immersion: SSPC-SP13/NACE 6-4.3.1 or 4.3.2, or ICRI No. 310.2R CSP 2-3**

**Tinting**

Do not tint.

**Application Conditions**

- **Temperature (air, surface):**
  - B62V210 Hardener 50°F (10°C) minimum, 110°F (43°C) maximum
  - B62V211 Hardener 40°F (4.5°C) minimum, 77°F (25°C) maximum

**Material should be 50°F (10°C) to 77°F (25°C) for optimal performance.**

**Relative humidity:** 85% maximum

Refer to product Application Bulletin for detailed application information.

**Ordering Information**

Refer to the MSDS sheet before use.

Published technical data and instructions are subject to change without notice. Contact your Sherwin-Williams representative for additional technical data and instructions.

**Safety Precautions**

The Sherwin-Williams Company warrants our products to be free of manufacturing defects in accord with applicable Sherwin-Williams quality control procedures. Liability for products proven defective, if any, is limited to replacement of the defective product or the refund of the purchase price paid for the defective product as determined by Sherwin-Williams. NO OTHER WARRANTY OR GUARANTEE OF ANY KIND IS MADE BY SHERWIN-WILLIAMS, EXPRESSED OR IMPLIED, STATUTORY, BY OPERATION OF LAW OR OTHERWISE, INCLUDING MERCHANDIBILITY AND FITNESS FOR A PARTICULAR PURPOSE.
White Metal Blast Cleaning per SSPC-SP10/NACE 2. Blast clean all free of laitance, concrete dust, dirt, form release agents, moisture. Remove all loose mortar and foreign material. Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Iron & Steel (atmospheric service)
Minimum surface preparation is Commercial Blast Cleaning per SSPC-SP6/NACE 3, or SSPC-SP12/NACE No. 5. For surfaces prepared by SSPC SP6/NACE 3, first remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. For better performance, use Near White Metal Blast Cleaning per SSPC-SP10/NACE 2. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (2-3 mils / 50-75 microns). For surfaces prepared by SSPC-SP12/NACE No. 5, all surfaces shall be cleaned in accordance with WJ-3/NV2. Pre-existing profile should be approximately 2 mils (50 microns). Prime any bare steel the same day as it is cleaned or before flash rusting occurs.

Iron & Steel (immersion service)
Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Near White Metal Blast Cleaning per SSPC-SP10/NACE 2, or SSPC-SP12/NACE No. 5. For SSPC-SP10/NACE 2, blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (2-3 mils / 50-75 microns). For SSPC-SP12/NACE No.5, all surfaces to be coated shall be cleaned in accordance with WJ-3/NV2. Pre-existing profile should be approximately 2 mils (50 microns). Remove all weld spatter. Prime any bare steel the same day as it is cleaned or before flash rusting occurs.

Concrete and Masonry
For surface preparation, refer to SSPC-SP13/NACE 6, or ICRI No. 310.2R, CSP 2-3. Surfaces should be thoroughly clean and dry. Concrete and mortar must be cured at least 28 days @ 75°F (24°C). Remove all loose mortar and foreign material. Surface must be free of laitance, concrete dust, dirt, form release agents, moisture curing membranes, loose cement and hardeners. Fill bug holes, air pockets, holes with Steel-Seam FT910. Primer required.

Follow the standard methods listed below when applicable:
ASTM D4258 Standard Practice for Cleaning Concrete.
ASTM D4259 Standard Practice for Abrading Concrete.
ASTM D4260 Standard Practice for Etching Concrete.
ASTM F1869 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete.
SSPC-SP 13/NACE 6 Surface Preparation of Concrete.
ICRI No. 310.2R Concrete Surface Preparation.

Concrete, Immersion Service:
For surface preparation, refer to SSPC-SP13/NACE 6, Section 4.3.1 or 1.3.2 or ICRI No. 310.2R, CSP 2-3.

Temperature (air, surface):
- B62V210 Hardener: 50°F (10°C) minimum, 110°F (43°C) maximum.
- B62V211 Hardener: 40°F (4.5°C) minimum, 77°F (25°C) maximum.

Material should be 50°F (10°C) to 77°F (25°C) for optimal performance.
Relative humidity: 85% maximum

Application Equipment:
The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compliant with existing VOC regulations and compatible with the existing environmental and application conditions.

Reduction Not recommended

Clean Up MEK, R6K10 or R7K104 Reducer

Airless Spray
Unit...45:1 Pump, minimum
Pressure...4000 psi
Hose...3/8" ID
Tip...0.15" - 0.17"
Filter...60 mesh

Plural Component
Equipment Acceptable
Brush For stripe coating and repair only
Brush...Nylon/Polyester or Natural Bristle
Roller For stripe coating and repair only
Cover...3/8" woven with solvent resistant core

If specific application equipment is not listed above, equivalent equipment may be substituted.
**APPLICATION PROCEDURES**

Surface preparation must be completed as indicated.

**Mixing Instructions:** Mix contents of each component thoroughly using low speed power agitation. Make certain no pigment remains on the bottom or the sides of the can. Then combine four parts by volume of Part A with one part by volume of Part B. Thoroughly agitate the mixture with power agitation. To ensure that no unmixed material remains on the sides or bottom of the cans after mixing, visually observe the container by pouring the material into a separate container. Apply paint at the recommended film thickness and spreading rate as indicated below:

</table>

Material should be at least 50°F (10°C) for optimal performance. If maximum recoat time is exceeded, abrade surface before recoating. Drying time is temperature, humidity, and film thickness dependent. Sterilize and rinse per AWWA C652.

**Pot Life:** 20 minutes 20 minutes 10 minutes

*Dependent upon temperature and mass

Sweat-in-Time: 5 minutes None None

Application of coating above maximum or below minimum recommended spreading rate may adversely affect coating performance.

**CLEAN UP INSTRUCTIONS**

Clean spills and spatters immediately with MEK, R6K10. Clean tools immediately after use with MEK, R6K10. Follow manufacturer’s safety recommendations when using any solvent.

**APPLICATION BULLETIN**

**PART A** B62H210 Gold

**PART A** B62L210 Blue OAP

**PART B** B62V210 HARDENER

**PART B** B62V211Low TEMPERATURE HARDENER

**PERFORMANCE TIPS**

**Repair of Pitted Tank Bottoms**

**Extensive, deep pitting:**

**Options:**

**Option 1**...Apply a full wet coat, by spray application, of Dura-Plate UHS Primer. Follow with rubber squeegee to work material into and fill the pitted areas. After recommended drying time, apply a full coat of Dura-Plate UHS at recommended film thickness.

**Option 2**...Apply Dura-Plate UHS Clear Laminant Resin with 1½ oz fiberglass mat over the pitted areas. After recommended drying time, apply a full coat of Dura-Plate UHS at recommended film thickness.

**Option 3**...Weld new steel plates, or use puddle welds, as required to repair pitted areas. Coat areas as recommended.

**Shallow pitting, isolated areas:**

**Options:**

**Option 1**...Same as number 1 above.

**Option 2**...Apply Steel Seam FT910 as required to fill the pitted areas. Coat areas as recommended.

When using spray application, use a 50% overlap with each pass of the gun to avoid holidays, bare areas, and pinholes. If necessary, cross-coat spray at a right angle.

Spreading rates are calculated on volume solids and do not include an application loss factor due to surface profile, roughness or porosity of the surface, skill and technique of the applicator, method of application, various surface irregularities, material lost during mixing, spillage, overthinning, climatic conditions, and excessive film build.

No reduction of material is recommended as this can affect film build, appearance, and adhesion.

Stripe coat all crevices, welds, and sharp angles to prevent early failure in these areas.

Do not mix previously catalyzed material with new.

Do not apply the material beyond recommended pot life.

In order to avoid blockage of spray equipment and hose, flush equipment with MEK, R6K10 or R7K104 Reducer at least once every 30 minutes using the B62V210 Hardener and after each kit when using the Low Temperature Hardener, and before periods of extended downtime.

For Immersion Service: (if required) Holiday test in accordance with ASTM D5162 for steel, or ASTM D4787 for concrete.

When using an OAP fluorescent pigment system, use the B62L210 Primer, with a non-OAP Containing Dura-Plate UHS topcoat color.

Refer to Product Information sheet for additional performance characteristics and properties.

**SAFETY PRECAUTIONS**

Refer to the MSDS sheet before use.
