ZINC CLAD® 4100
ORGANIC ZINC-RICH EPOXY PRIMER

PRODUCT INFORMATION

PRODUCT DESCRIPTION

ZINC CLAD 4100 is a three-component, polyamide epoxy, zinc-rich coating. It contains 89.2% by weight of zinc dust pigment in its dried film.

- Meets Class B requirements for slip coefficient and creep resistance
- Provides cathodic protection
- Damaged film exhibits "self-healing" properties
- Fast Recoat Time
- Outstanding application properties

PRODUCT CHARACTERISTICS

Finish: Flat
Color: Gray-Green, mixed
Volume Solids: 74% ± 2%
Weight Solids: 90% ± 2%
VOC (mixed): <320 g/L; 2.67 lb/gal unreduced
<340 g/L; 2.80 lb/gal 5% reduction
Zinc Dust Pigment Content in Dry Film: 89.2%
Mix Ratio: 3 components, premeasured

Recommended Spreading Rate per coat:

</tr>
</tbody>
</table>

*Maximum Recoat: Unlimited. Must have a clean, dry surface for topcoating. "Loose" chalk or salts must be removed in accordance with good painting practice.

To cure: 7 days 7 days 5 days 3 days

Drying time is temperature, humidity, and film thickness dependent.

Pot Life: 8 hours 8 hours 4 hours 2 hours

Sweat-in-Time: none none none none

Shelf Life: Part A: 18 months, unopened
Part B: 18 months, unopened
Part F: 24 months, unopened
Store indoors at 40°F (4.5°C) to 100°F (38°C)

Flash Point: 62°F (17°C), Seta Flash, mixed

Reducer/Clean Up:
Below 80°F (27°C): Reducer #58 or MEK
Above 80°F (27°C): Reducer #58 or Reducer #104

www.sherwin-williams.com/protective

RECOMMENDED USES

For use over properly prepared steel.
- Bridge and Highway Structures
- Fabrication Shops
- Stadiums and sports complexes
- Drilling Rigs
- Piping
- Refineries
- Barges & ships
- Shop or field application

PERFORMANCE CHARACTERISTICS

Substrate*: HRS A36
Surface Preparation*: SSPC-SP 10 / NACE 2
System Tested*:
1 ct. Zinc Clad 4100 @ 3.0-5.0 mils (75-125 microns) dft
1 ct. Macropoxy 646 @ 3.0-10.0 mils (75-250 microns) dft
1 ct. Hi-Solids Polyurethane 250 @ 3.0-5.0 mils (75-125 microns) dft

Test Name | Test Method | Results
--- | --- | ---
Adhesion (Zinc Primer only) | ASTM D4541, PATTI | 2,248 psi
Adhesion | ASTM D4541, PATTI | 2,828 psi
Corrosion Weathering | ASTM D5894, 15 cycles, 5,040 hours | Rating 10 per ASTM D610 for rusting; Rating 10 per ASTM D714 for blistering
Salt Fog Resistance | ASTM B117, 5,040 hours | Rating 10 per ASTM D610 for rusting; Rating 10 per ASTM D714 for blistering
Slip Coefficient (Zinc Primer only) | AISC Specification for Structural Joints using ASTM A325 or ASTM A490 Bolts | Class B @5 mil DFT (72 hour cure)

Surface Preparation

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Refer to product Application Bulletin for detailed surface preparation information.

Minimum recommended surface preparation:
Iron & Steel: SSPC-SP6/NACE 3, 2 mil (50 micron) profile

Tinting

Do not tint.

Application Conditions

Temperature: 35°F (1.7°C) minimum, 120°F (49°C) maximum (air and surface)
40°F (4.5°C) minimum, 120°F (49°C) maximum (material)
At least 5°F (2.8°C) above dew point
Relative humidity: 85% maximum

Refer to product Application Bulletin for detailed application information.

Ordering Information

Packaging:
3.25 gallons (12.3L) mixed:
Part A 1 gallon (3.78L) in a five gallon can
Part B 1 gallon (3.78L)
Part F 73 lb (33 Kg) Zinc Dust
1 gallon (3.78L) mixed:
Part A 0.30 gallon (1.14L)
Part B 0.30 gallon (1.14L)
Part F 22 lb (10 Kg) Zinc Dust
Weight: 27.82 ± 0.2 lb/gal ; 3.33 Kg/L, mixed

Safety Precautions

Refer to the MSDS sheet before use.

Published technical data and instructions are subject to change without notice. Contact your Sherwin-Williams representative for additional technical data and instructions.

Disclaimer

The information and recommendations set forth in this Product Data Sheet are based upon tests conducted by or on behalf of The Sherwin-Williams Company. Such information and recommendations set forth herein are subject to change and pertain to the product offered at the time of publication. Consult your Sherwin-Williams representative to obtain the most recent Product Data Information and Application Bulletin.

Warranty

The Sherwin-Williams Company warrants our products to be free of manufacturing defects in accord with applicable Sherwin-Williams quality control procedures. Liability for products proven defective, if any, is limited to replacement of the defective product or the refund of the purchase price paid for the defective product as determined by Sherwin-Williams. NO OTHER WARRANTY OR GUARANTEE OF ANY KIND IS MADE BY SHERWIN-WILLIAMS, EXPRESSED OR IMPLIED, STATUTORY, BY OPERATION OF LAW OR OTHERWISE, INCLUDING MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

Surface Preparations

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Zinc rich coatings require direct contact between the zinc pigment in the coating and the metal substrate for optimum performance.

Iron & Steel (atmospheric service)
Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Commercial Blast Cleaning per SSPC-SP6/NACE 3. For better performance, use Near White Metal Blast Cleaning per SSPC-SP10/NACE 2. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (2 mils / 50 microns). Coat any bare steel the same day as it is cleaned or before flash rusting occurs.

When used on Ductile Iron Pipe, surface preparation shall be in accordance with NAPF 500-03-04 Abrasive Blast Cleaning of Ductile Iron Pipe with a minimum 1.0 mil surface profile.

Galvanized Steel
Allow to weather a minimum of six months prior to coating. Solvent Clean per SSPC-SP1 (recommended solvent is VM&P Naphtha). When weathering is not possible, or the surface has been treated with chromates or silicates, first Solvent Clean per SSPC-SP1 and apply a test patch. Allow paint to dry at least one week before testing adhesion. If adhesion is poor, brush blasting per SSPC-SP16 is necessary to remove these treatments. Rusty galvanizing requires a minimum of Hand Tool Cleaning per SSPC-SP2, prime the area the same day as cleaned or before flash rusting occurs.

Weathered Zinc-Rich Primer
Remove zinc salts by either high pressure water washing and scrubbing with stiff bristle brush or sweep blast followed by water flush. Allow to dry.

Note: If blast cleaning with steel media is used, an appropriate amount of steel grit blast media may be incorporated into the work mix to render a dense, angular 1.5-3.0 mil (38-75 micron) surface profile, per Keane-Tator Surface Profile Comparator. A profile up to 4 mils (100 microns) is acceptable, however, coating must be applied to achieve a minimum of 3 mils (75 microns) dft. This method may result in improved adhesion and performance.

Application Bulletin

Application Conditions

| Temperature: | 35°F (1.7°C) minimum, 120°F (49°C) maximum (air and surface) |
| Relative humidity: | 85% maximum |

Application Equipment

The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compliant with existing VOC regulations and compatible with the existing environmental and application conditions.

Reducer/Clean Up
Below 80°F ....................Reducer #58 or MEK
Above 80°F ....................Reducer #58 or Reducer #104

Airless Spray
(use Teflon packings and continuous agitation)
Pressure...............2000 - 2500 psi
Hose....................3/8" ID
Tip .....................015" - .019"
Filter ...................none
Reduction ................As needed up to 5% by volume

Conventional Spray
(continuous agitation required)
Gun ..................Binks 95
Fluid Nozzle ............68
Air Nozzle ..............68P
Atomization Pressure ....50 psi
Fluid Pressure ..........10 - 20 psi
Reduction ...............As needed up to 5% by volume

Keep pressure pot at level of applicator to avoid blocking of fluid line due to weight of material. Blow back coating in fluid line at intermittent shutdowns, but continue agitation at pressure pot.

Brush
Brush..................Small areas only; natural bristle
Reduction ...............Not recommended

APPLICATION BULLETIN

APPLICATION PROCEDURES

Surface preparation must be completed as indicated. Zinc Clad 4100 comes in 3 premeasured containers which when mixed provide 3.25 gallons (12.3L) or 1 gallon (3.78 L) of ready-to-apply material depending on kit size.

Mixing Instructions:
Mix contents of component A and B thoroughly with low speed power agitator. Make certain no pigment remains on the bottom of the can. Then combine 1 part by volume of Part A with 1 part by volume of Part B, then add the appropriately sized Part F (zinc dust). Thoroughly agitate the mixture with power agitation. After mixing, pour through a 30-60 mesh screen. Re-stir before use. If reducer solvent is used, add only after components have been thoroughly mixed. Continuous agitation of mixture during application is required, otherwise zinc dust will quickly settle out.

Apply paint at the recommended film thickness and spreading rate as indicated below:

<table>
<thead>
<tr>
<th>Coverage sq ft/gal (m²/L) @ 1 mil / 25 microns dft</th>
<th>Theoretical coverage 237 (6.0)</th>
<th>396 (9.7)</th>

</tbody>
</table>

*Maximum Recoat: Unlimited. Must have a clean, dry surface for topcoating. "Loose" chalk or salts must be removed in accordance with good painting practice.

To cure: 7 days 7 days 5 days 3 days

Drying time is temperature, humidity, and film thickness dependent.

Pot Life: 8 hours 8 hours 4 hours 2 hours

Sweat-in-Time: none none none none

Application of coating above maximum or below minimum recommended spreading rate may adversely affect coating performance.

CLEAN UP INSTRUCTIONS

Clean spills and splatters immediately with MEK. Clean tools immediately after use with MEK. Follow manufacturer's safety recommendations when using any solvent.
