ZINC CLAD® 3100
WATERBASED PRE-CONSTRUCTION PRIMER

Product Information

| Part A | B69V480 | Base
|---------|---------|---------|
| Part F | B69D480 | Dust

**Product Description**

ZINC CLAD 3100 is a two-package, waterborne, inorganic zinc pre-construction primer designed to provide excellent welding and weathering properties. It provides the end user added flexibility in shops & facilities where VOC & HAPS emissions are restrictive. Zinc Clad 3100 brings a number of features & benefits, among them are:

- No HAPS
- Fast dry
- High speed weldability and cutting
- Optimized for automated plate line application
- Heat resistant
- Provides corrosion protection
- Long term weathering
- Long pot life (up to 24 hours)
- Can be sprayed via standard airless, air-assisted airless, HVLP and conventional spray equipment
- Compatible with manual, semi-automatic and automated welding techniques

**Product Characteristics**

<table>
<thead>
<tr>
<th>Finish:</th>
<th>Flat</th>
</tr>
</thead>
<tbody>
<tr>
<td>Color:</td>
<td>Gray</td>
</tr>
<tr>
<td>Weight Solids:</td>
<td>59% ± 2% mixed</td>
</tr>
<tr>
<td>VOC (EPA Method 24):</td>
<td>&lt;50 g/L ; 0.42 lb/gal</td>
</tr>
<tr>
<td>Zinc Content in Dry Film:</td>
<td>46.4% by weight</td>
</tr>
<tr>
<td>Mix Ratio:</td>
<td>2 components; premeasured A:F 1:1 by weight 4.16 gallons mixed</td>
</tr>
</tbody>
</table>

**Recommended Spreading Rate per coat:**

| Wet mls (microns) | 1.7 | (43) |
| Dry mls (microns) | 0.6 | (15) |
| Theoretical coverage sq ft/gal (m²/L) | 802 | (19.7) |

*Recommended DFT is for blasted steel having an angular and jagged surface profile of ~2 mils (50 microns). For extended weathering, a higher DFT may be specified, but weld quality & cutting speeds may be inhibited.*

**Drying Schedule @ 1.7 mils wet (43 microns):**

- To touch: 5 minutes
- To handle: 10 minutes
- To topcoat: 3 hours
- To cure: 7 days

*Drying time is temperature, humidity, and film thickness dependent.*

**Flash Point:** N/A

**Reducer/Clean Up:** Water

**Recommended Uses:**

- Shipbuilding
- Petrochemical tank construction
- Water storage and Water treatment tank fabrication
- Structural steel
- Protection of steel plate and shapes during storage, transportation and fabrication

**Shelf Life:**

- Part A - 9 months, unopened
- Part F - 24 months, unopened

Store indoors at 50°F (10°C) to 100°F (38°C)

**Pot Life:** 12-24 hours*

*Temperature, humidity, and volume dependent, among other factors.*

Steel/Atmospheric and Immersion Service:
1 ct. Zinc Clad 3100 0.60 (15)
1 or 2 cts. Recommended Topcoat

Zinc Clad 3100 is compatible with a wide range of Sherwin-Williams primers and topcoats. For specific recommendations related to Atmospheric or Immersion Service, please consult your Sherwin-Williams Representative for a recommendation appropriate to your service needs.

A brief list of commonly specified products are:
- Dura-Plate 235
- Dura-Plate 301
- Fast Clad ER
- Macropoxy 80
- Macropoxy 646
- MIL-DTL-24441
- MIL-PRF-23236
- Seaguard 5000 HS
- Seaguard 6000
- Seaguard 6100

Surface Preparation

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Zinc rich coatings require direct contact between the zinc pigment in the coating and the metal substrate for optimum performance.

Minimum recommended surface preparation:

Steel/Atmospheric and Immersion Service:
SSPC-SP10/NACE 2, 2 mil (50 micron) maximum profile
Sa 2½ Very Thorough Blast Cleaning (ISO 8501-1) NACE 2

Note: Surface profile should be angular and jagged with a profile height of ~2 mils (50 microns)

Tinting

Do not tint.

Application Conditions

Temperature: 50°F (10°C) minimum, 110°F (43°C) maximum (air, surface, and material) At least 5°F (2.8°C) above dew point

Relative humidity: 30% minimum, 85% maximum

Refer to product Application Bulletin for detailed application information.

Ordering Information

Packaging:
- Part A: 3.5 gallons in a 5 gallon pail
- Part F: 30.8 lbs. zinc dust in a 2 gallon pail

Weight: 15.32 ± 0.2 lb/gal, mixed

Safety Precautions

Refer to the MSDS sheet before use.

Published technical data and instructions are subject to change without notice. Contact your Sherwin-Williams representative for additional technical data and instructions.

Warranty

The Sherwin-Williams Company warrants our products to be free of manufacturing defects in accord with applicable Sherwin-Williams quality control procedures. Liability for products proven defective, if any, is limited to replacement of the defective product or the refund of the purchase price paid for the defective product as determined by Sherwin-Williams. NO OTHER WARRANTY OR GUARANTEE OF ANY KIND IS MADE BY SHERWIN-WILLIAMS, EXPRESSED OR IMPLIED, STATUTORY, BY OPERATION OF LAW OR OTHERWISE, INCLUDING MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Zinc rich coatings require direct contact between the zinc pigment in the coating and the metal substrate for optimum performance.

**Steel/Atmospheric and Immersion Service:**
Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Near White Metal Blast Cleaning per SSPC-SP10/NACE 2. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (2 mils / 50 microns maximum). Prime any bare steel the same day as it is cleaned or before flash rusting occurs.

**Note:** If blast cleaning with steel media is used, an appropriate amount of steel grit blast media may be incorporated into the work mix to render a dense, angular 2 mils (50 micron) maximum surface profile. This method may result in improved adhesion and performance.

Temperature: 50°F (10°C) minimum, 110°F (43°C) maximum (air, surface, and material).

Relative humidity: 30% minimum, 85% maximum

**Application Equipment**

The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compliant with existing VOC regulations and compatible with the existing environmental and application conditions.

**Reducer/Clean Up**

- **Water**

**Airless Spray**

- **Pump**
  - Pressure: 800-1,400 psi
  - Hose: 1/4" ID
  - Tip: 517
  - Filter: 60 mesh
  - Reduction: As needed up to 10% by volume with Water

**Conventional Spray (HVLP)**

- **Gun**
  - Fluid Nozzle: 72
  - Needle: 72
  - Air Nozzle: 63PB
  - Atomization Pressure: 55 - 60 psi
  - Fluid Pressure: 15 - 30 psi
  - Reduction: Not required

Keep pressure pot at level of applicator to avoid blocking of fluid line due to weight of material. Blow back coating in fluid line at intermittent shutdowns, but continue agitation at pressure pot.

**Brush**

For touch-up only

If specific application equipment is not listed above, equivalent equipment may be substituted.

www.sherwin-williams.com/protective
Surface preparation must be completed as indicated.

Zinc Clad 3100 comes in 2 premeasured containers which when mixed provides 4.16 gallons (15.7L) of ready-to-apply material.

**Mixing Instructions:** Mix paint thoroughly with low speed power agitation prior to use. While mixing Part A, with power agitation, add zinc dust, Part F. **Do not add vehicle to zinc dust.** Add water reducer after both components have been thoroughly mixed. After mixing, pour through a 40-mesh screen.

Continuous agitation of mixture during application is required, otherwise zinc dust will settle out quickly.

Apply paint at the recommended film thickness and spreading rate as indicated below:

<table>
<thead>
<tr>
<th>Wet mils (microns)</th>
<th>1.7 (43)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dry mils (microns)</td>
<td>0.6 (15)</td>
</tr>
<tr>
<td>Theoretical coverage sq ft/gal (m²/L)</td>
<td>642 (15.8)</td>
</tr>
</tbody>
</table>

*Recommended DFT is for blasted steel having an angular and jagged surface profile of ~2 mils (50 microns). For extended weathering, a higher DFT may be specified, but weld quality & cutting speeds may be inhibited.

**Drying Schedule @ 1.7 mils wet (43 microns):**

- To touch: 5 minutes
- To handle: 10 minutes
- To topcoat: 3 hours
- To cure: 7 days

*Drying time is temperature, humidity, and film thickness dependent.*

**Sweat-in-Time:** None required

**Pot Life:** 12-24 hours

*Temperature, humidity, and volume dependent, among other factors.

Application of coating above maximum or below minimum recommended spreading rate may adversely affect coating performance.

**Clean Up Instructions**

Clean spills and spatters immediately with water. Clean tools immediately after use with water. Follow manufacturer's safety recommendations when using any solvent.
