PRODUCT INFORMATION

PRODUCT CHARACTERISTICS

ENVIROLASTIC CR965 is a 100% solids spray applied, aromatic polyurea coating and lining system, which exhibits extraordinary toughness and elastomeric performance characteristics. CR965 can be applied at thicknesses of 30-250 mils in multiple passes during a single application.

- Fast cure - short down time
- No VOCs and low odor
- Seamless flexible and waterproof
- Impact, tear, and abrasion resistant
- Bridges moving cracks to 1/16"
- Retains physical properties at -20°F to 250°F

Finish: Semi-Gloss
Color: Select colors available
Volume Solids: 100%
VOC (calculated): <50 g/L; 0.42 lb/gal
Mix Ratio: 1:1 by volume

Recommended Spreading Rate per coat:

<table>
<thead>
<tr>
<th>Wet mils (microns)</th>
<th>Minimum</th>
<th>Maximum</th>
</tr>
</thead>
<tbody>

</tbody>
</table>

| Dry mils (microns) | 30.0 (750) | 250 (6250) |

| Coverage sq ft/gal (m²/L) | 6 (0.152) | 53 (1.35) |

Drying Schedule @ 30.0 mils wet (750 microns):

- 73°F/23°C
- 50% RH

To touch: 20 seconds
To recoat:
  - minimum: 20 seconds
  - maximum: 16 hours
Gel Time: 10 seconds
Tack Free: 20 seconds
Light Traffic: 2 hours
To cure:
  - Service: 24 hours
  - If maximum recoat time is exceeded, abrade surface before recoating.

Drying time is temperature, humidity, and film thickness dependent.

Test Name | Test Method | Results
---|---|---
Abrasion Resistance | ASTM D4060, CS17 wheel, 1000 cycles, 1000 g | 17.53 mg loss
Adhesion | ASTM D4541 | 350 psi, Concrete Failure
  | 566 psi Steel
  | 250 psi Wood Failure
Coefficient of Linear Thermal Expansion* | ASTM C531, (in/in/°F) | 4 x 10⁻⁴
Crack Bridging* | ASTM C 836 (@ -26°C -15°F)@1/16") | Pass
Durometer Hardness | ASTM D2240 Shore D | 22
Tear Strength | ASTM D634 | 265 lbf/in
Tensile Elongation | ASTM D638 | 270%
Tensile Modulus | ASTM D 638 | 100% modulus - 800 psi
  | 300% modulus - 1,500 psi
Tensile Strength | ASTM D638 | 511 psi
Water Vapor | ASTM D1653-03, Method A (dry cup), Condition A; ASTM E96-00 Desiccant Method, Procedure A | 105 mils (2625 microns), 77°F (25°C), 50% RH, 0.409 grains/hr ft² in Hg

* indicates testing completed using the B81V4350 isocyanate

If maximum recoat time is exceeded, abrade surface before recoating.

Drying time is temperature, humidity, and film thickness dependent.

Pot Life: None
Sweat-in-time: None
Viscosity (mixed): 550 cps

Shelf Life: 12 months, unopened
Store indoors at 40°F (4.5°C) to 110°F (43°C).

Flash Point: 200°F (93°C),
Reducer: Not recommended
Clean up*: MEK

*see Application Equipment section on Page 3

*Note: When using as a lining in immersion service, a minimum thickness of 60 mils is required. Refer to Performance Tips section.

The systems listed above are representative of the product’s use. Other systems may be appropriate.

**Surface Preparation**

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Refer to product Application Bulletin for detailed surface preparation information.

Minimum recommended surface preparation:

- **Steel:**
  - Atmospheric: SSPC-SP10/NACE 2, 2 mil profile
  - Immersion: SSPC-SP10/NACE 2, 3 mil profile
- **Concrete & Masonry:**
  - Sandblast or shotblast to remove all laitance and achieve a profile equal to 80-100 grit sandpaper.

Refer to SSPC-SP13/NACE 6 or ICRI Guide 03732.

**Surface Preparation Standards**

**Tinting**

Do not tint.

**Application Conditions**

Temperature:
- Material*: 120°F minimum, 160°F maximum
- Air and surface: -20°F minimum, 120°F maximum
- At least 5°F above dew point
- Relative humidity: 80% maximum

*Temperature needed may vary from Part A to Part B for better balance of dynamic pressures

Refer to product Application Bulletin for detailed application information.

**Safety Precautions**

Refer to the MSDS sheet before use.

Published technical data and instructions are subject to change without notice. Contact your Sherwin-Williams representative for additional technical data and instructions.

**Disclaimer**

The information and recommendations set forth in this Product Data Sheet are based upon tests conducted by or on behalf of The Sherwin-Williams Company. Such information and recommendations set forth herein are subject to change and pertain to the product offered at the time of publication. Consult your Sherwin-Williams representative to obtain the most recent Product Data Information and Application Bulletin.

**Warranty**

The Sherwin-Williams Company warrants our products to be free of manufacturing defects in accord with applicable Sherwin-Williams quality control procedures. Liability for products proven defective, if any, is limited to replacement of the defective product or the refund of the purchase price paid for the defective product as determined by Sherwin-Williams. NO OTHER WARRANTY OR GUARANTEE OF ANY KIND IS MADE BY SHERWIN-WILLIAMS, EXPRESSED OR IMPLIED, STATUTORY, BY OPERATION OF LAW OR OTHERWISE, INCLUDING MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

SURFACE PREPARATIONS

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Iron & Steel (immersion service)
Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Near White Metal Blast Cleaning per SSPC-SP10. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (3 mils). Remove all weld spatter and round all sharp edges by grinding. Prime any bare steel the same day as it is cleaned or before flash rusting occurs.

Iron & Steel (atmospheric service)
Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Near White Metal Blast Cleaning per SSPC-SP10. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (2 mils). Prime any bare steel the same day as it is cleaned or before flash rusting occurs.

Poured Concrete

New
For surface preparation, refer to SSPC-SP13/NACE 6. Surface must be clean, dry, sound, and offer sufficient profile to achieve adequate adhesion. Minimum substrate cure is 28 days at 75°F. Remove all form release agents, curing compounds, salts, efflorescence, laitance, and other foreign matter by sandblasting, shotblasting, mechanical scarification, or suitable chemical means. Refer to ASTM D4260. Rinse thoroughly to achieve a final pH between 10.0 and 13.0. Allow to dry thoroughly prior to coating.

Old
Surface preparation is done in much the same manner as new concrete; however, if the concrete is contaminated with oils, grease, chemicals, etc., they must be removed by cleaning with a strong detergent. Refer to ASTM D4258. Form release agents, hardeners, etc. must be removed by sandblasting, shotblasting, mechanical scarification, or suitable chemical means. If surface deterioration presents an unacceptably rough surface, Steel-Seam FT910 is recommended to patch and resurface damaged concrete.

Always follow the ASTM methods listed below:
ASTM D4258 Standard Practice for Cleaning Concrete.
ASTM D4259 Standard Practice for Abrading Concrete.
ASTM D4260 Standard Practice for Etching Concrete.
ASTM F 1869 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete

Immersion Service:
In addition to the above surface preparation, Brush Blasting of the concrete surface is required.

Application Bulletin
TRM.57

APPLICATION CONDITIONS

Temperature:
Material*: 120°F minimum, 160°F maximum
Air and surface: -20°F minimum, 120°F maximum
Relative humidity: 80% maximum

*Temperature needed may vary from Part A to Part B for better balance of dynamic pressures

APPLICATION EQUIPMENT

The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compatible with the existing environmental and application conditions.

Reducer ......................Not recommended

Clean-up .....................MEK
Equipment not used for 3 months or more should be flushed and left with Butyl Cellusolve™ inside and sealed.

Plural Component Heated Spray Equipment:
Equipment.....................1:1 Heated Plural Component Proportioner capable of at least 2500 psi
Gun .........................mechanical, air, or solvent purged impingement mix gun
Min Impingement
Port Size .....................020 in. (0.50 mm)
Fluid Pressure ..............2200 psi
Air Pressure .................100 psi
Inlet Strainer Screen ......30 mesh
Gun Screen .................80 mesh

If specific application equipment is listed above, equivalent equipment may be substituted. Consult your Sherwin-Williams Technical Service representative for specific equipment recommendations.

continued on back
**Application Procedures**

Surface preparation must be completed as indicated. Route and seal all cracks greater than 1/16" with EnviroLastic JS80 SL.

**Mixing Instructions:**
Agitate resin blend (B) component thoroughly with a drum mixer before use to disperse pigment and assure homogeneity. Do not thin. Do not mix “A” and “B” resins together. **Caution: Do not agitate in air and moisture.**

Apply coating/lining at the recommended film thickness and spreading rate as indicated below:

<table>
<thead>
<tr>
<th>Recommended Spreading Rate per coat:</th>
<th>Minimum</th>
<th>Maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wet mils (microns)</td>
<td>30.0 (750)</td>
<td>250 (6250)</td>
</tr>
<tr>
<td>Dry mils (microns)</td>
<td>30.0 (750)</td>
<td>250 (6250)</td>
</tr>
<tr>
<td>Coverage sq ft/gal (m²/L)</td>
<td>6 (0.152)</td>
<td>53 (1.35)</td>
</tr>
</tbody>
</table>

**Drying Schedule @ 30.0 mils wet (750 microns):**

- @ 73°F/23°C 50% RH
- To touch: 20 seconds
- To recoat:
  - minimum: 20 seconds
  - maximum: 16 hours
- Gel Time: 10 seconds
- Tack Free: 20 seconds
- Light Traffic: 2 hours
- To cure:
  - Service: 24 hours

If maximum recoat time is exceeded, abrade surface before recoating.

**Drying time is temperature, humidity, and film thickness dependent.**

- **Pot Life:** None
- **Sweat-in-time:** None
- **Viscosity (mixed):** 550 cps

Application of coating above maximum or below minimum recommended spreading rate may adversely affect coating performance.

**Clean Up Instructions**
Clean spills and spatters immediately with MEK. Clean tools and equipment immediately after use (including both A & B sides of plural component spray system) with MEK. Equipment not used for 3 months or more should be flushed and left with Butyl Cellusolve™ inside and sealed.

**Disclaimer**
The information and recommendations set forth in this Product Data Sheet are based upon tests conducted by or on behalf of The Sherwin-Williams Company. Such information and recommendations set forth herein are subject to change and pertain to the product offered at the time of publication. Consult your Sherwin-Williams representative to obtain the most recent Product Data Information and Application Bulletin.

**Performance Tips**

For concrete, always perform Calcium Chloride test as per ASTM F1869. Do not proceed with MVE >3 lbs.

**Where primers are used, do not fill the profile on concrete or steel with excess primer. Topcoat epoxy primers immediately after they become tack free.** "Tack free" is defined as slight to medium pressure with a gloved hand, placed on a primed surface, that when lifted shows a slight imprint or distortion to the surface, with no transfer of primer to the glove.

For immersion applications, a minimum total dry film thickness of 40 mils on steel and 60 mils on concrete is required.

For **Immersion Service:** Spark test in accordance with ASTM D5162 for steel, or ASTM D4787 for concrete. Repair holidays found in accordance with these ASTM methods.

May be applied in one or two coats to achieve the recommended film thickness.

For steel, stripe coat all chine, welds, bolted connections, and sharp angles to prevent early failure in these areas. For concrete, all cracks must receive a 6" wide by 30 mil detail coat.

Use only heated, plural component equipment capable of producing 2,500 psi at 160°F and 2 gallon/minute output consistently.

In order to avoid blockage of spray equipment, clean equipment before use or before periods of extended downtime with MEK. Equipment not used for 3 months or more should be flushed and left with Butyl Cellusolve™ inside and sealed.

While spraying, use a 50% overlap with each pass of the gun to avoid holidays, bare areas, and pinholes. If necessary, cross spray at a right angle.

Spreading rates are calculated on volume solids and do not include an application loss factor due to surface profile, roughness or porosity of the surface, skill and technique of the applicator, method of application, various surface irregularities, material lost during mixing, spillage, overthinning, climatic conditions, and excessive film build.

Do not agitate in air and moisture.
Consult your Sherwin-Williams representative for specific application and performance recommendations.
Refer to Product Information sheet for additional performance characteristics and properties.

**Safety Precautions**
Refer to the MSDS sheet before use.
Published technical data and instructions are subject to change without notice. Contact your Sherwin-Williams representative for additional technical data and instructions.

**Warranty**
The Sherwin-Williams Company warrants our products to be free of manufacturing defects in accord with applicable Sherwin-Williams quality control procedures. Liability for products proven defective, if any, is limited to replacement of the defective product or the refund of the purchase price paid for the defective product as determined by Sherwin-Williams. NO OTHER WARRANTY OR GUARANTEE OF ANY KIND IS MADE BY SHERWIN-WILLIAMS, EXPRESSED OR IMPLIED, STATUTORY, BY OPERATION OF LAW OR OTHERWISE, INCLUDING MERCHANDABILITY AND FITNESS FOR A PARTICULAR PURPOSE.
